Singing and Imagination: A Human Approach to a Great Musical Tradition

By Thomas Hemsley

Oxford University Press, United Kingdom, 1998. Paperback. Book Condition: New. 214 x 136 mm. Language: English Brand New Book ***** Print on Demand *****. Singing ought to start with an urgent impulse to share with the audience a story, which can only be brought about when one has brought the character, music and text to life in one's own head. Again like Kagen, Hemsley spends no time on anatomy or physics, arguing that this can even be detrimental in creating an artist. In diverse interaction processes that characterize music experience, the human hand can be seen as a mediator and facilitator for the brain's processing of musical expressive patterns. After a brief overview on the human expressive system for music, we consider gestures and hand articulations in music production and performance, focusing on hand dexterity and hand dystonia. Then, we discuss the role of the hand in music listening, conducting, and learning, showing that both in sound-generation and sound-accompaniment the hand mediates and facilitates action and perception in relation to music. An argument for whole body and holistic approaches to research and singing. Jan 2006. 59-64. "The book is addressed to those 'with a gift for singing who would like to understand better how to approach putting that gift to use'. It will appeal to a wide range of singers, professional and others, and will challenge those pedagogues who rely heavily on the so-called 'scientific' approach at the expense of fundamental human and artistic considerations.
